# Power Bi Project

**Ghayasudin Ghayas** 

Data Science student

**QS-Academy** 

April 22, 2024

## Introduction

This project, intended for completion by the end of the Power BI course in QS-Academy Batch 22 student practical work, utilizes a CSV file dataset. The specified Key Performance Indicators (KPIs) are outlined as follows:

- > Descriptive statistics presented visually, such as box-and-whisker plots or histograms, to illustrate data distribution.
- Incorporation of an interactive element, such as an Excel pivot table with slicers, allowing users to explore data subsets.
- Exploration of data-driven inquiries through various visualizations (e.g., scatter plots, line graphs), unveiling insights and potentially applying data transformations.
- > Implementation of analytical storytelling with effective visualizations to convey insights, adhering to best practices for data representation.

## Data Visualization Workflow

## 1- Data Extraction, Transformation, and Loading (ETL):

- Extract, transform, and load the data, utilizing both Excel and Power BI.
- Clean and reshape the data in preparation for analysis.
- Table Relationships:

## 2- Establish relationships between tables based on matching fields.

- Data Analysis and Visualization:
- Identify and specify required fields for analysis.
- Determine suitable visualization graphs for the analysis.
- Creation of Measures and Columns:
- Create necessary measures and columns as prerequisites for analysis.

## Key KPI Visualization Focus

Visualization of the data is considered based on the following three main KPIs:

- 1. Workplace Fatalities in 2012.
- 2. Workplace Injuries/Illnesses in 2012.
- 3. Workplace Penalties in 2013.

## Workplace Fatalities 2012

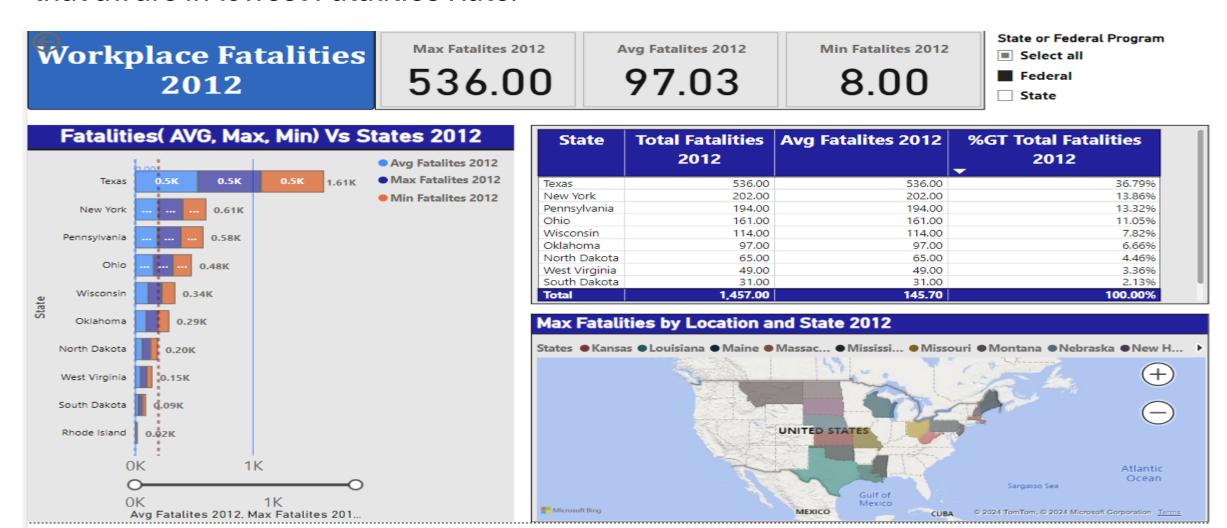

## According to the report:

- Total fatalities are 1,132.
- The highest (max) fatalities are in Texas, with 536 fatalities.
- The average fatalities amount to 92.34.
- The lowest (min) fatalities are 8.

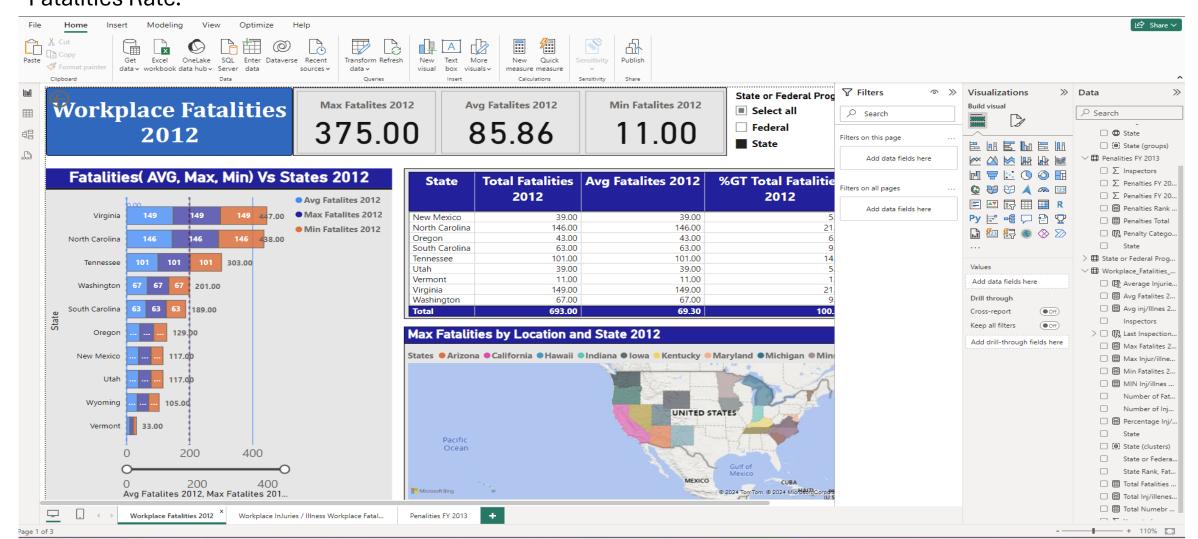

## Federal Highest and Lowest Fatality Rates

Texas is in highest fatalities rate and 2<sup>nd</sup> highest is Network but Rod Island and after that all are in lowest Fatalities Rate.

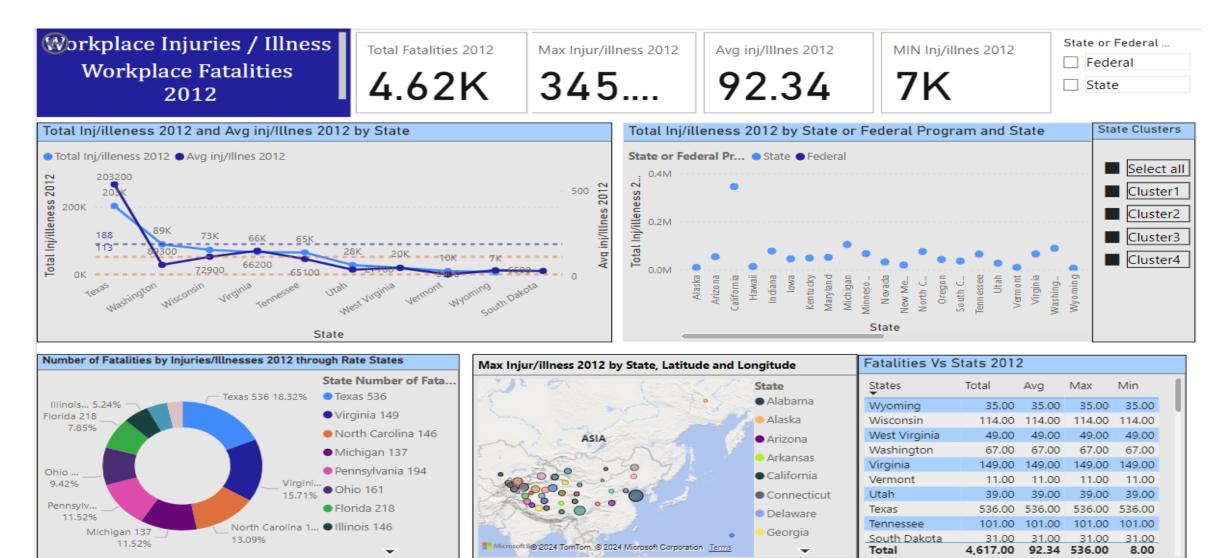

### **States Highest & Lowest Fatalities Positions**

Virginia is in highest fatalities rate and 2nd highest is North Carolina but Vermont and after that all are in lowest Fatalities Rate.

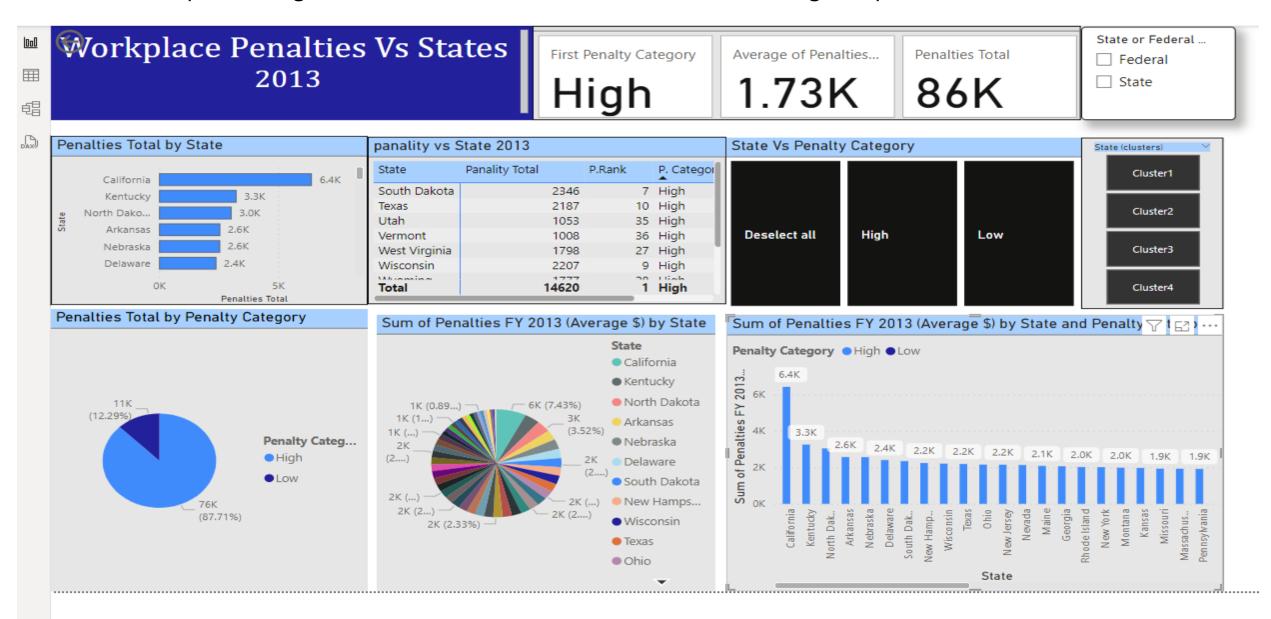

### Workplace Injuries / Illness -2021

According to the report, Total Fatalities is 4.62 K and the highest (Max) fatalities is Taxes 345 K Average Fatalities is 92.34.K and Mini Fatalities is 7K.

### **Workplace Penalties Vs States 2013**

Based on the report findings, the Total Penalties is 86000, California is in highest penalties Rate

## Conclusion

#### 1- Workplace Fatalities:

- In 2012, Texas held the highest position in workplace fatalities, followed by Virginia in 2nd place. Vermont and other states ranked lower.
- In terms of federal versus state data, the federal level recorded a higher number of fatalities compared to the state level.

#### 2- Workplace Injuries and Illnesses 2012:

At the federal level, there was a high rate of injuries and illnesses in 2012, while the state level reported lower rates. Once again, Texas ranked highest for injuries at the federal level

#### 3- Penalties vs. State 2012:

California held the highest position in penalties, while Oregon ranked lowest. Approximately 87.71% of the total data were associated with states in the high penalties category, while 12.29% were in the low penalties category.
